Subject: Letter of Recommendation for WhaleTeq ECG Set & SECG Assistant Software

Dear WhaleTeq partners,

I am writing this letter to give my opinions and experiences to WhaleTeq ECG Set for ECG development testing.

The reasons why I can recommend the WhaleTeq test tool today are:

1. It helped us test and validate our new products in a quick and efficient way.
2. It has saved our time significantly in generating required waveforms we need to validate our ECG hardware and software performances.
3. With the SECG Assistant Software designed for different regulations like IEC 60601-2-25, my team is able to use less time in setting up test sequences and to conduct test.

Using the WhaleTeq tools allowed us to be more efficient during development and evaluation phase of our ECG related modules.

Sincerely,

Jean-Philippe DIDON
