Dear WhaleTeq team:

I am writing to give my sincere recommendations for the CTS/CSE Compliance Analyzer software by your company.

This software tool tremendously facilitates our ECG product development and certification process. There are 3 major advantages, signal generation and automation, digitized test reports, and international standard compliance.

**1. Signal generation and automation**

The software completes WhaleTeq's MCEG as an integrated development and certification environment. Arbitrary ECG signals can feed to testing unit for verification. Also the scripting capability enables us to have a fully automated test setup and reduce development efforts.

**2. Digitized test reports**

Through instant and abundant content in "*CTS/CSE Compliance Analyzer*" reports, we can practice an agile development and monitor characteristics of developed analysis algorithm in each recursion.

**3. International standard compliance**

The software with MCEG is not only an integration development environment. It is also a certification ready setup. This test setup enables us to comply towards IEC 60601-2-25, and gives us strong confidence for product certification.

Therefore, I would like to give my recommendations for the CTS/CSE Compliance Analyzer. We have no doubt this powerful tool will help the development and validation of ECG products.

Sincerely,

Dr. Tingchou Hung Chien  
Director of Engineering  
QT Medical, Inc.
