

## DFS400 AED / Defibrillator Tester

Displays defibrillation shock waveform, energy (in Joules), parameters, and characteristic points at the same time

- ◆ Intuitive software interface with shock-related information on one screen – the waveform, energy (in Joules), parameters, and characteristic points captured at a sampling rate of 4μs
- ◆ Automatically saves complete raw data of the shock waveform to establish a test history
- ◆ Outputs ECG waveforms with selectable adult and child modes to achieve high accuracy for testing
- ◆ Raw data playback – plays recorded raw data or customized waveforms for repeated verification to facilitate the development process
- ◆ Built-in switchable loads ranging from 25Ω to 200Ω
- ◆ Repeatability and Reproducibility Analysis – compares the shock waveforms of multiple DUTs or a single DUT to confirm the consistency of quality and reliability, facilitating conducting the endurance test described in IEC 60601-2-4\*
- ◆ Provides software development kit (SDK) for developing automated testing programs

\*Note: The Repeatability and Reproducibility Analysis needs a separate purchase.
